Q1.) Doremon-Explorer-Hub is an angular based project in which there are three routes, First one is character which contains all characters, second one is Gradgets routes which contains some of the gdtdgets and last one is gallery which contains some of the photos of Doremon. We have used inMemoryWebapi as a server and perform CRUD operations. In this project we can add more character, delete existing character, update the character details and also search them.

Q2.)

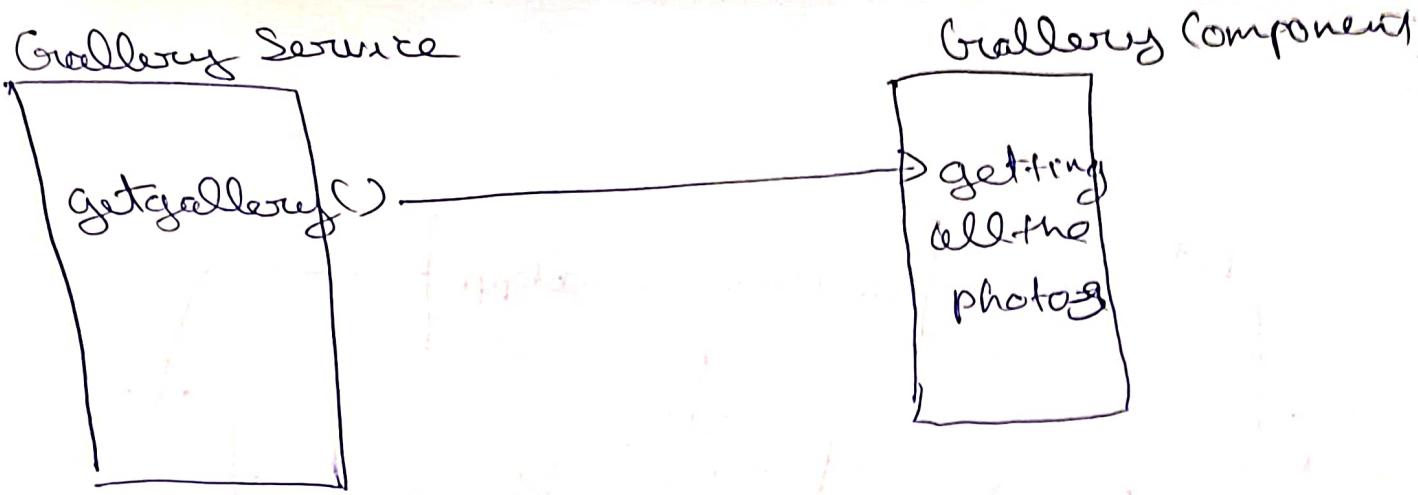
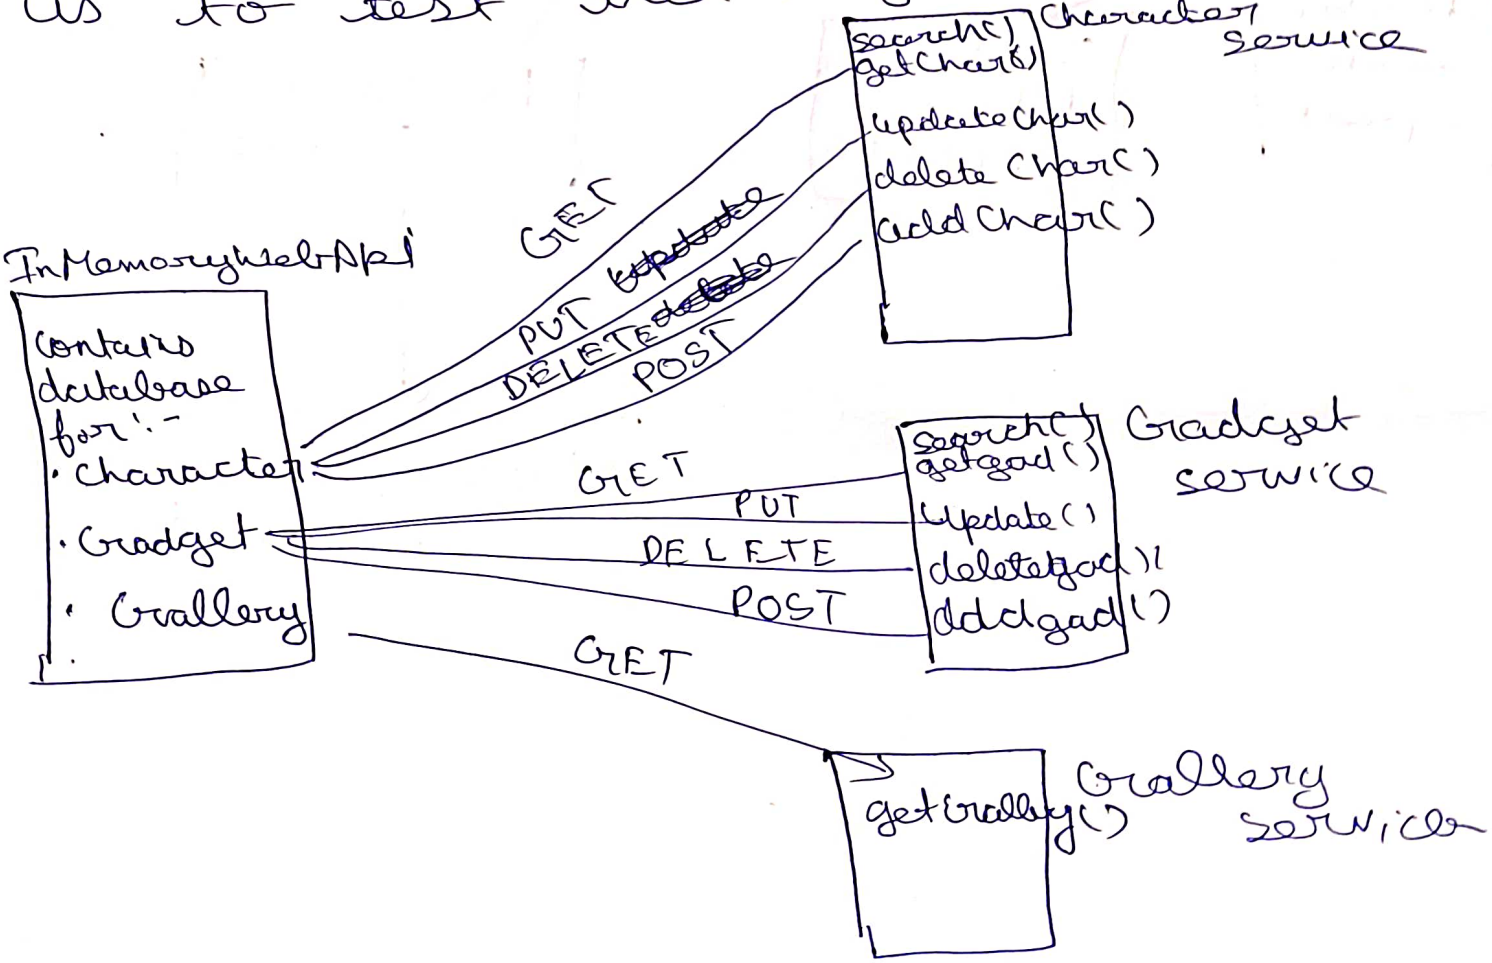
delete gadget
Gadget Service
getgadget()
addgadget()
deletegadget()
getOnegad()
Updategd()
search()
Gadget Detail Compont
get One gadget
Update gadget
search Component
search gadget



(Q4:)

HTTP Client is basically used for making requests like PUT, POST, GET and DELETE ~~~~ from server.

InMemoryWebApi :- It is basically a mock database or server which help us to test our Angular code.



Q5.)
